

# Technical reader: "Orkest Bazar" mobile entertainment

This is the technical reader for mobile entertainment, not for the street show !!

Type show:

Mobile entertainment. Three artists push their cart, they walk, play music, perform circus and search interaction with the audience.

## duration:

2x 45min

## Scene:

We walk around with a cart. Slightly sloping terrain is possible, stairs are not.

Hard surface, no mud or loose sand ...

The cart is 90cm wide. It can not pass through a standard door.

The cart is 2.5 m high. The vertical part can be folded to pass a door, but where we walk around and entertain we need at least 2,5m and preferably more.

In 45min we walk between 500m and 1km.

## Sound:

We play live music which we reinforce with an amplifier. We can take a certain amount of background noise, but it's better if there is little or no noise.

It is useful for us to know who we can call to turn the sound lower at certain noisy locations.

## Dressing

Near the place to start animation

Dressing room with mirror and electricity.

It must be possible to lock.

## Outside or inside ?

If there is heavy wind or rain, we can entertain in a covered place.
