

Technical rider: Orkest Bazar" mobile animation

This is the technical rider for mobile animation, not for the fixed street show.

Type of show: Mobile animation.

Three artists push their cart, walk, make music, do circus and seek interaction with the casual audience.

Duration: 2 x 40 min

Scene: We walk around with a cart. Slightly sloping terrain is possible, stairs are not.

Hard surface is good, no mud, loose sand...

The cart is 90cm wide. She can't go through a standard door. She can go through a double door.

The cart is 2.5 m high. The vertical part can be folded to fit through a door, but where we walk around and animate, at least 2.5m is needed and preferably more.

In 40min we walk between 500m and 1km.

If there are many factors on our route that we have to take into account (such as where we can and cannot make noise, time schedules, where stops should be planned...) then it is valuable to have a volunteer to point us in the right direction. leads.

Sound: We play live music that we amplify with a generator. We can handle a certain amount of background noise, but it's better when there is little noise.

Please close to the place where the animation starts: Dressing room with mirror and electricity.

Outside inside? If there is heavy wind or rain, we can play in a covered place.
